

ACSSI™

Advanced Control Slide Show for Instructors/Professors

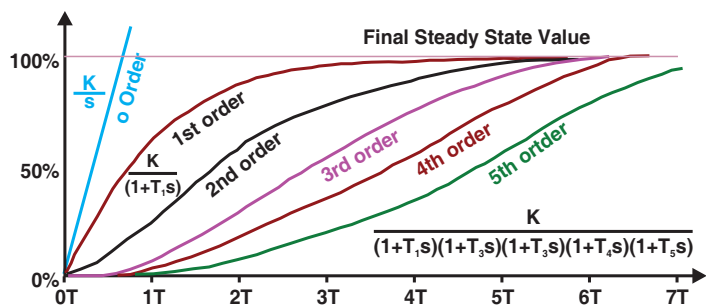

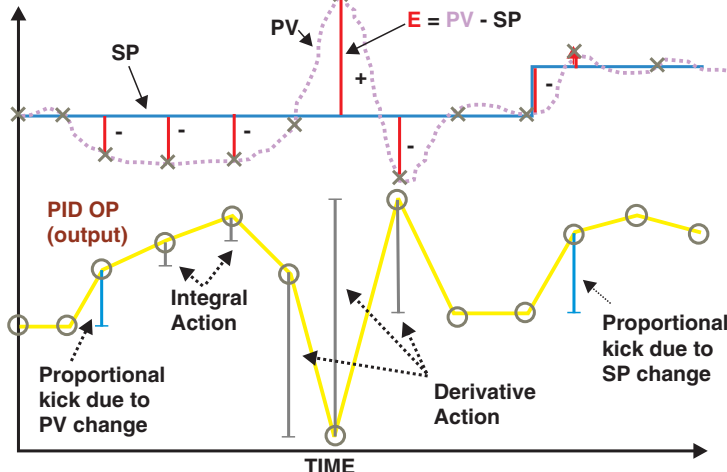

ACSSI is a collection of about 200 Power-Point slides, compiled and ready to use by:

- Process Control Instructors in Plants
- Process Control Professors in Colleges

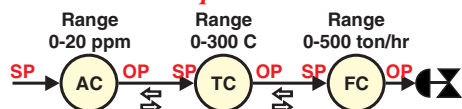

How Process Control can help Plant Profits

PID Control Action

Every plant has experienced control engineers capable of mentoring and training new engineers and technicians. These experienced control engineers are knowledgeable and capable of teaching new ones but often, the training material is not easily available. To put together a training course designed for the practical control room environment can take weeks or months of Power-Point slide development and compilation.

PiControl created the ACSSI product designed especially for process control instructors (both in industry and colleges) to quickly and easily put together effective training courses targeted at training control engineers, technicians and college students.

PiControl offers complete turn-key process control training services. Using PiControl products and services, you can put together an effective 2-3 day class-room process control training course easily.

PiControl will provide you the following training products:

- ♦ ACSSI Power-Point slides (about 200 in number)
- ♦ Simcet - Real-time PID training and testing simulator
- ♦ Pitops-PID Process Control Laboratory on PC
- ♦ Pitops-TFI Dynamics Identification Software

PiControl will guide you how to design and conduct training course at your site (plant or college) with your own experienced training staff. Do not spend enormous amount of training fees by using outside training companies. Instead, use PiControl training products and services to develop and impart training using your own experienced and qualified staff.

In these busy times, using our products and services will save you a lot of time, effort and money.
