

Uniqueness of PiControl Training:

Our courses are *very practical, easy to understand* for everyone – engineers, technicians, operators and students – both new and experienced. That is why customers consider us the best.

Our courses are more *hands-on* than any competitor. Students download and install many process control *software products on their personal laptops* for use during the training. The software products are full-blown industrial process control software applications used by industry. This level of hands-on approach tremendously aids the learning process and mastering the course theory and practicals.

We offer both *classroom* and *online (web-based)* training.

Classroom training is conducted in our training centers, at colleges, in hotel conference rooms and even at your plant-site or office location.

We use the most *modern equipment and methodology* for our online (web-based) training. Participants see not only the training but also have the option of seeing the face of the instructor. Use of modern web-based training makes our training more interesting and helps to focus on the training material.

Our instructors have over 30 years industrial experience and training experience. They not only have the technical knowledge but also skills to make sure participants are fully engaged and able to concentrate on the material.

Contact us now, enroll in our training and see for yourself why customers feel our training is world-class and the very best.
